

Elevating Technology with Excellence

&

Clean Up Application

Software Development Project

DETAILED PROPOSAL

CONFIDENTIAL

Project Scope:

A home services aggregator platform that will onboard partners (service providers) in different categories and deliver to the customers. All jobs will be centrally managed by the aggregator without sharing clients' contact details with the partners.

As per our discussion, the following will be the list of features and functionalities that will be included within the project:

1. Customer App Features

Service Booking:

- Browse and select services (cleaning, maintenance, etc.).
- Book services with date, time, and location preferences.
- View service descriptions, pricing, and estimated duration.

Service Tracking:

- GPS-based live tracking of assigned service providers.
- Real-time updates on the status of the ongoing service.
- Estimated Time of Arrival (ETA) for cleaners or technicians.

Booking History and Management:

- Access and manage past, current, and upcoming bookings.
- Option to rebook, reschedule, or cancel services.

Ratings and Feedback:

- Rate completed services and provide detailed feedback.
- View responses to feedback or complaints.

User Account Management:

- User-friendly registration and login via email or phone.
- Edit personal information, preferences, and saved addresses.

Payment Options:

- Secure payment processing via multiple gateways (credit/debit cards, wallets, etc.).
- View payment history and download receipts.
- Promotions and discount management (coupons, loyalty rewards).

Notifications and Alerts:

- Receive push notifications for booking confirmations, service updates, and reminders.
- Alerts for promotions, feedback responses, or support follow-ups.

Communication Features:

- In-app chat with support or assigned service providers.
 - Masked calling for privacy during customer-service provider communication.
-

2. Technician (Cleaner) App Features Task

Assignment and Management:

- View assigned tasks with detailed information (customer name, location, service type).
- Update job status (e.g., "Accepted," "In Progress," "Completed").
- Upload proof of task completion (photos or customer signatures).

Real-Time Updates and Reporting:

- Notify coordinators of issues, delays, or task-related incidents.
- Submit reports for unresolved complaints or additional support needs.

Daily Schedule Management:

- Access a list of daily and weekly scheduled tasks.
- Receive instant notifications for new or updated tasks.

Navigation and Tracking:

- Integrated GPS for optimized routes to service locations.
- Real-time navigation assistance.

Performance Insights and Feedback:

- View performance metrics, completed tasks, and customer feedback.
 - Regular updates on ratings and improvement suggestions.
-

3. Admin Panel Features

Centralized Dashboard:

- Overview of all stakeholders: Customers, Coordinators, Technicians, Drivers, and Partners.
- Monitor real-time service progress and operational status.

User and Role Management:

- Add, edit, and deactivate accounts for all stakeholders.
- Define and manage permissions for each user role.

Service Monitoring and Management:

- Oversee bookings, cancellations, and service schedules.
- Track service quality and address operational issues.

Financial Operations:

- Manage payment processing for customers and partners.
- Generate detailed financial reports (revenue, expenses, partner payouts).
- Track refunds, complaints, and resolved payment disputes.

Performance and Analytics:

- Generate reports on system health, service quality, and performance metrics.
- Analyze customer feedback for insights into areas needing improvement.

Complaint Management:

- Centralized system for tracking and resolving customer complaints.
- Assign and escalate unresolved complaints to relevant coordinators.

Partner Management:

- Onboard and manage third-party service partners.
- Provide partners with performance analytics and complaint reports.
- Enable partners to track payments and bookings via their module.

Communication Management:

- Send bulk notifications for service updates, promotions, or reminders.
- Oversee chat logs and communication between stakeholders.

Security and Data Privacy:

- Enforce encrypted data storage and secure system access.
- Maintain masked communication for all interactions.
- Regularly update compliance with data privacy regulations.

Integration Management:

- Manage third-party APIs for payment gateways, GPS tracking, and support systems.
- Add or remove service categories or modules for scalability.

Technology Structure and Architectural Schema:

We will follow the following latest technology structure and architectural schema for the development of this project

Technology Stack	
Backend	C# .NET
Database	MS SQL Server
Frontend	.NET MVC/ Angular/ React
Cloud and Deployments	Azure
Mobile	.NET MAUI/ Flutter/ Native

Timeline Estimations:

Here are the estimations for the above-mentioned requirements

Task ID	Sub Task	Sub-Task Details	Notes	Estimated Hours
1	1	Database Design Structure	High-Level estimation on design	40
2	Application Architecture Design			
	2.1	Application Architecture Design For Backend APIs	Using .NET	20

	2.2	Application Architecture Design For Web Portal		20
	2.3	Application Architecture Design For Mobile Application	Using flutter/ .NET MAUI or native platforms	20
3	Mobile App Client Interface - Core Features			
	3.1	User Registration/Login	Includes email verification, social login integration (optional)	16
	3.2	User Profile Management	Profile creation, editing, payment method management (credit card, digital wallets)	8
	3.3	Service Browsing/Search	Service category browsing, filtering, location-based search, service provider search (ratings, reviews, availability)	20
	3.4	Service Booking & Scheduling	Service selection, customization, schedule selection, booking confirmation, order tracking, notifications	32
	3.5	Service Management	Order history, rescheduling/cancellation, service ratings & reviews	12
	3.6	Complaints & Support	Complaint submission & tracking, live chat with customer support	10
	3.7	Payments		15
	3.8	Location & Photos		10
	3.9	Chat with Provider		12
4	Mobile App Partner interface - Core Features			
	4.1	Job Acceptance/Rejection	Includes notifications and job details	12
	4.2	Job Management	Job status updates, job details & tracking, crew assignment	20
	4.3	Crew Management	Assign jobs, track crew location & progress	15
	4.4	Payments & Billing	View payment history, invoices, manage payouts	10
	4.5	Communication	Chat with aggregator, chat with clients (job-specific)	10
5	Mobile App Technician Interface			
	5.1	Schedule Management	View daily/weekly schedules, update job status, report issues	15
	5.2	Payments	Record payment, view earnings, daily/weekly reconciliation	8
	5.3	Profile Management	View ratings & profile, manage shifts & availability	5
6	Mobile App Driver Interface			
	6.1	Route & Schedule	View daily routes, and delivery schedules, track deliveries, report issues	18

	6.2	Payments	Collect & record payments, daily/weekly reconciliation, manage shifts & availability	10
7	Partner Web Portal			
	7.1	Account Management	Profile & settings, service area management	10
	7.2	Crew Management	Add/edit/remove crew members, manage crew schedules & assignments	15
	7.3	Payments & Billing	View & manage payments, generate invoices & reports	12
	7.4	Coordinator Roles	Define roles & access permissions	8
	7.5	Dashboard	KPIs, job performance analytics	10
	7.6	Communication	Chat with aggregators, partners, drivers/cleaners	12
	7.7	Scheduling	Manage daily/weekly schedules, manage day offs & holidays	15
8	Aggregator Web Portal			
	8.1	Partner Onboarding	Partner registration & verification, partner profile management	15
	8.2	Zone Management	Define service areas & zones	10
	8.3	Client Management	View & manage client data	10
	8.4	Accounting & Finance	Generate financial reports, manage payments & payouts	20
	8.5	Marketing Analytics	Track key metrics (customer acquisition, revenue, etc.)	15
9	.NET Backend			
	9.1	API Development	RESTful APIs for all mobile and web applications	50
	9.2	Database Integration	Design & implement database schema, data migration & synchronization	30
	9.3	Business Logic	Implement core business rules & logic	40
	9.4	Cloud Deployment	Deploy to cloud infrastructure (Azure/AWS)	30
10	Mobile App Development Configuration			
	10.1	Configuration		40
	10.2	Testing & Debugging	Unit testing, integration testing, user acceptance testing	50
		Estimated Total Hours		750
		Buffer Time + Total		800
